

# TOTAL PROTECTION AGAINST

**BUKBOK (Powder Post Beetle), ANAY and UNOS (Drywood Termites):**

# DELTA METHRIN WOODTEC 2.5EC

Highly Effective Wood Protectant Concentrate

- ✓ PROTECTS ALL KINDS OF TIMBER, WOOD BOARDS, BAMBOO, RATTAN & FOREST PRODUCTS FROM PESTS & INSECT ATTACKS
- ✓ HIGHLY EFFECTIVE FORMULATION
- ✓ PROTECTION UP TO 5 YEARS
- ✓ BEARS THE GREEN LABEL FOR SAFETY
- ✓ LOW ODOR & STAIN
- ✓ REGISTERED WITH THE FERTILIZER AND PESTICIDES AUTHORITY

**DILUTION RATIO:**

**1 LITER**

to 100-200 Liters of Water/ Oil/ Kerosene

**100 ML**

to 10 Liters of Water/ Oil/ Kerosene

PACKAGING: Carboy (20L), Liter, 100ML

## THE EXPERT'S CHOICE

WOODTEC 2.5EC is an extremely active and powerful insecticide that guarantees the safety of freshly felled logs, rattan furniture, sawn timber, plywood, particle board and other indigenous materials. It offers an expert and total protection from insect pests such as pinhole and shothole borers, powder post beetles (bukbok), ambrosia beetles (anay), drywood termites (unos) and wood worms.

## PREMIUM BENEFITS & FEATURES

- GIVES LONG LASTING PROTECTION UP TO 10 YEARS**  
WOODTEC 2.5EC guarantees the protection of your wood from insect attacks up to 10 years.
- A VERY POWERFUL PROTECTANT**  
WOODTEC 2.5EC control all kinds of insect attacks on any type or indigenous material. Its active ingredient, DELTAMETHRIN is one of the most potent insecticides used today.
- HIGHLY EFFECTIVE FORMULATION**  
Fit at low concentration for brush-on, surface spray, dip tank and vacuum impregnation treatments.
- HIGH MARGIN OF SAFETY**  
WOODTEC 2.5EC bears the GREEN LABEL OF SAFETY. It is safe, non-toxic and registered with the Fertilizer and Pesticides Authority.
- IT HAS LOW ODOR AND STAIN**

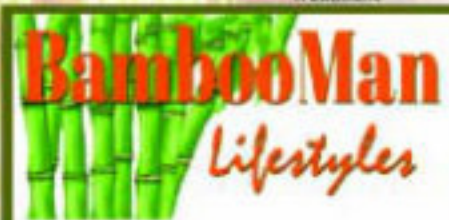

## DIRECTIONS FOR PROPER USE / TAMANG PARAAN NG PAGGAMIT

- ☑ WOODTEC 2.5 EC is mixed in light oil, kerosene or water and applied in accordance to the period of protection required and chosen application technique.
- ☑ It may be applied by dipping or spraying until it achieves entire surface wetting. The type of wood to be protected determines the effective dilution rate for treatment.
- ☑ Test results have shown that there is zero "stripping effect" when wood materials are dipped in WOODTEC 2.5 EC. Dipping is now one of the most common applications today. This technique avoids the need to fill up the tank with anything other than the standard solution.
- ☑ WOODTEC 2.5 EC ay isinasama sa maputing langis, gaas o tubig ayon sa kailangang tagal na proteksiyon at paraan ng paggamit.
- ☑ Ang sukat ng timplada nito ay nakabase sa uri ng kahoy na paglalagyan. Maari itong gawin sa pamamagitan ng pagtubog, pagpahid o pagbobomba hanggang mabasa and buong kahoy.
- ☑ Ang pagtutubog ng kahoy at pinaka epektibo at karaniwang ginagamit na paraan ngayon dahil sa paraang ito naiwasan ang "stripping effect" ng kahoy at walang naiwang bahagi ng kahoy na walang proteksiyon.

Imagine the variety of creatures that feeds on your precious wood without the total protection of WOODTEC 2.5EC.

WOODTEC 2.5EC. is applied using the following techniques:

## TREATMENT PERIOD / TAMANG PANAHON NG PAGGAMIT

Any fresh cut wood surface is prone to insect attacks. Treatment of exposed wood surfaces prior of drying should be made as soon as possible after the timber is cut and must be always be within 12 hours.

Ang mga bagong putol na kahoy ay mabilis na inaatake ng mga peste kaya't kaagad itong lagyan ng kemikal sa loob ng 12 oras bago patuyuin.

WOOD TYPE	PROTECTION REQUIRED	DILUTION RATE		APPLICATION METHOD
		WOODTEC 2.5EC	DELLENT	
FRESHLY FELLED LOGS	MEDIUM (3 - 6 MONTHS)	100ML	25 KILOGRAM WATER / 100L OIL	SPRAY ON ALL SURFACES IMMEDIATELY AFTER FELLING
	SHORT TERM (MONTHS)	100ML	25 KILOGRAM WATER / 100L OIL	
FRESH SAWN TIMBER, RATTAN, BAMBOO	LONG TERM (YEARS)	100ML	25 KILOGRAM WATER / 100L OIL	DIP SPRAY OR BRUSH ON ALL SURFACES
